## **ABSTRACT**

The project “YourCart: One Stop For Everything” as name suggests is a one place solution focussing on development of both an earning and a shopping platform in a single application and webpage.

## **INTRODUCTION**

The project “YourCart” will have an application which will be developed using Flutter with Dart and the webpage would be developed using Wordpress with supported backend by PHP and database in SQL.

“YourCart” will be focusing on operations such as trade in Cryptocurrency which includes buying and selling of Crypto holdings, it will further be capable to trade in stocks and shares and the profit earned using these markets instead of being given as direct money, would rather be given as special coins named ‘**JRS**’ in user’s YourCart wallet. User’s will be able to expend and use these coins for shopping purposes on the website itself.

“YourCart” will be an easy-to-use website with only a single webpage feature developed keeping every need of a user in mind so he or she could enjoy his experience of earn and shop. The website and application will be usable for both a beginner and an advanced user.

The “YourCart” has mainly four main modules.

1. CryptoTrading Page - Will allow user to trade in Crypto and earn in JRS coins
2. StockTrading Page - Will allow user to trade in Stocks and earn in JRS coins
3. Shooping Page - Will allow user to buy from shops with JRS Coins
4. JRS Coin System - This will a coin system which will have a fixed amount i.e. 10\$ = 1JRS

The Final goal of “YourCart” is to provide you a place where you can earn and shop at same time so you don’t need to be dependent on your salary or someone to buy your personal needs.

---

## **SYSTEM ANALYSIS**

### **Existing System:**

The Existing System in our technology right now provides both Earning and Shopping platform but in different websites or different platforms, which can lead you spend extra money than you planned to.

### **Reason for Proposed System:**

The proposed system that is “YourCart” will make your earn by stock market and spend you in shopping platform in a single place which will stop you at certain extent from spending extravagantly because it allows shopping from only JRS coins.

Our following Proposed system has the following advantage:

1. User Friendly Interface
2. Fast access to database
3. Less Crashing
4. Search Facility for shopping
5. Cart option with advance features
6. Quick and Safe Transactions

\

---

## **FEASIBILITY ANALYSIS**

### **TECHNICAL FEASIBILITY:**

We can strongly claim our system is technically feasible, since there we will not use any unreliable plugins in Wordpress and we will also make sure iOS and Android in flutter will be similar and bugs will be taken care. All resources needed for development of the software.

### **ECONOMICAL FEASIBILITY:**

We can ensure that development of application and website is highly economically feasible. The developer will not need to spend much in its development as there are no specific paid plugins or features.

---

## **HARDWARE CONFIGURATION**

- PC with I3 or up processors; Android Qualcomm processor
- Hard Disk
- Monitor
- Keyboard
- Mouse
- Mobile
- Charger

## **SOFTWARE CONFIGURATION**

- OS: WINDOWS 10& ABOVE; Android 10 or above
- MySQL
- phpmyadmin

\

## **OTHER CONFIGURATION**

1. DEMAT ACCOUNT FOR STOCK AND CRYPTO
2. PAYMENT GATEWAY LOGIN
